### Question 6b

```
resident_dist<-c(rep(50,100),rep(100,500),rep(200,200))
n<-rpois(1000,50)
t<-array(dim = 1)

for(i in 1:length(n))
{t[i] <- sum(sample(resident_dist,n[i]))}

mean(t)
```

```
## [1] 5955
```

```
var(t)
```

```
## [1] 778693.7
```
